STATE OF THE ESD INDUSTRY

Past

- HBM (human body model) most prevalent failure mode
- S20.20 level of compliance sufficient for most operations

Current

- CDM (charged device model) largest source of ESD issues
- Must assure customers of ability to safely handle Class 0 components
- Continuous monitoring is essential in high-reliability, high value environments
 - Critical to include SMT equipment
- Diagnosing ESD problems can be challenging – data required

Future

- Process control is inevitable. Customers will come to expect this.
- High levels of automation, ultra-sensitive components, and shop floor software will drive manufacturers to proactively manage their ESD initiatives
- Compliance verification replaced by auditing data – inspections inadequate

WHAT IS THE BEST SOLUTION?

System based on continuous detection in production areas

- Ongoing readings at every stage where product could be damaged
- Constant collection, reporting and analysis of data

Equal attention to machine, bench and personnel monitoring

User-friendly tools for ESD coordinators who wear many hats

Ability to demonstrate robust static control measures to customers

Transition away from reactive, fire-fighting approaches to proactive programs based on active management of entire ESD environment

Static Management Program (SMP)

**ELIMINATE
PAPER LOGS**

**PROCESS
EFFICIENCY**

**LATEST
TECHNOLOGY**

**PROGRAM
VALIDATION**

- Capture, record, and report on data
- Find and measure ESD Events and EOS
- Prevent component failures
- Reduce losses due to ESD, EMI Voltage and EOS
- Increase yields and reduces rework
- Increase customer satisfaction

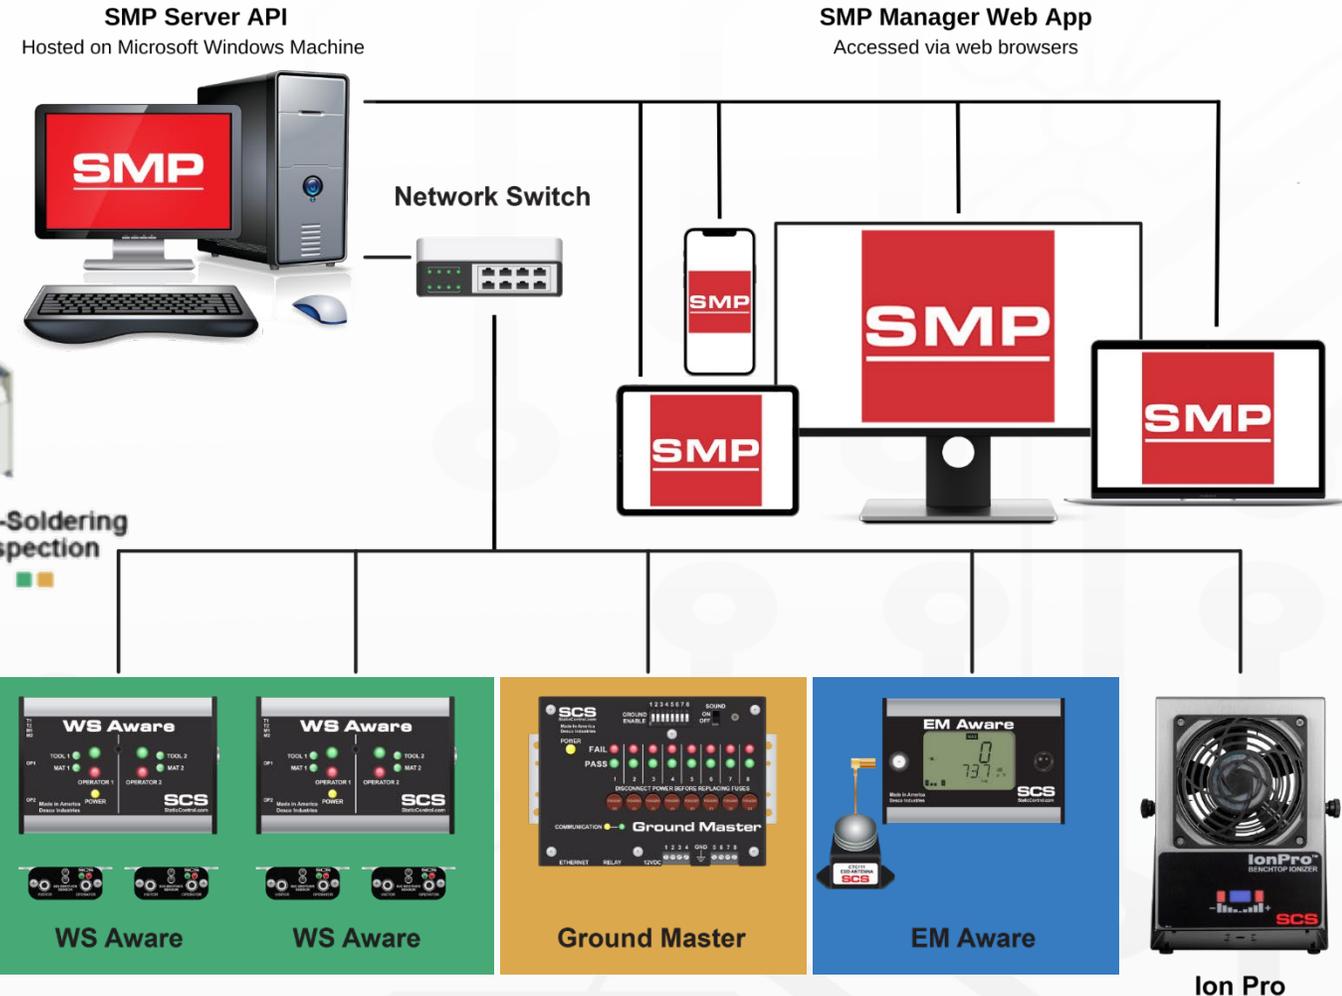

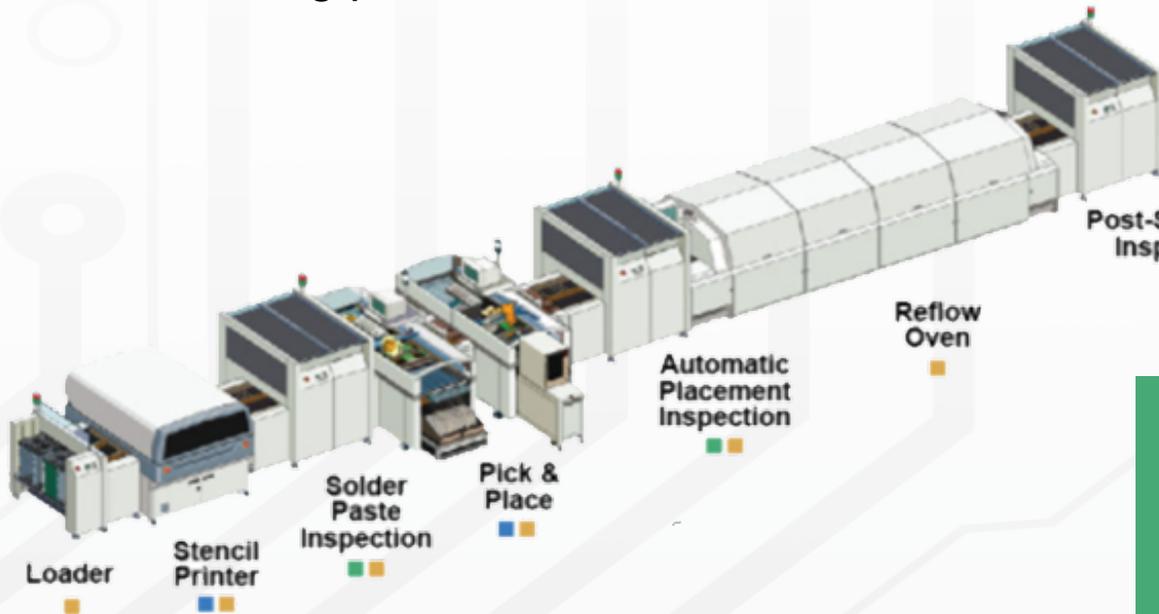

SMP STATIC MANAGEMENT PROGRAM

- ✓ Real-Time Monitoring
- ✓ ESD, EMI Voltage & EOS Detection
- ✓ Component Failure Prevention

STATIC MANAGEMENT PROGRAM (SMP)

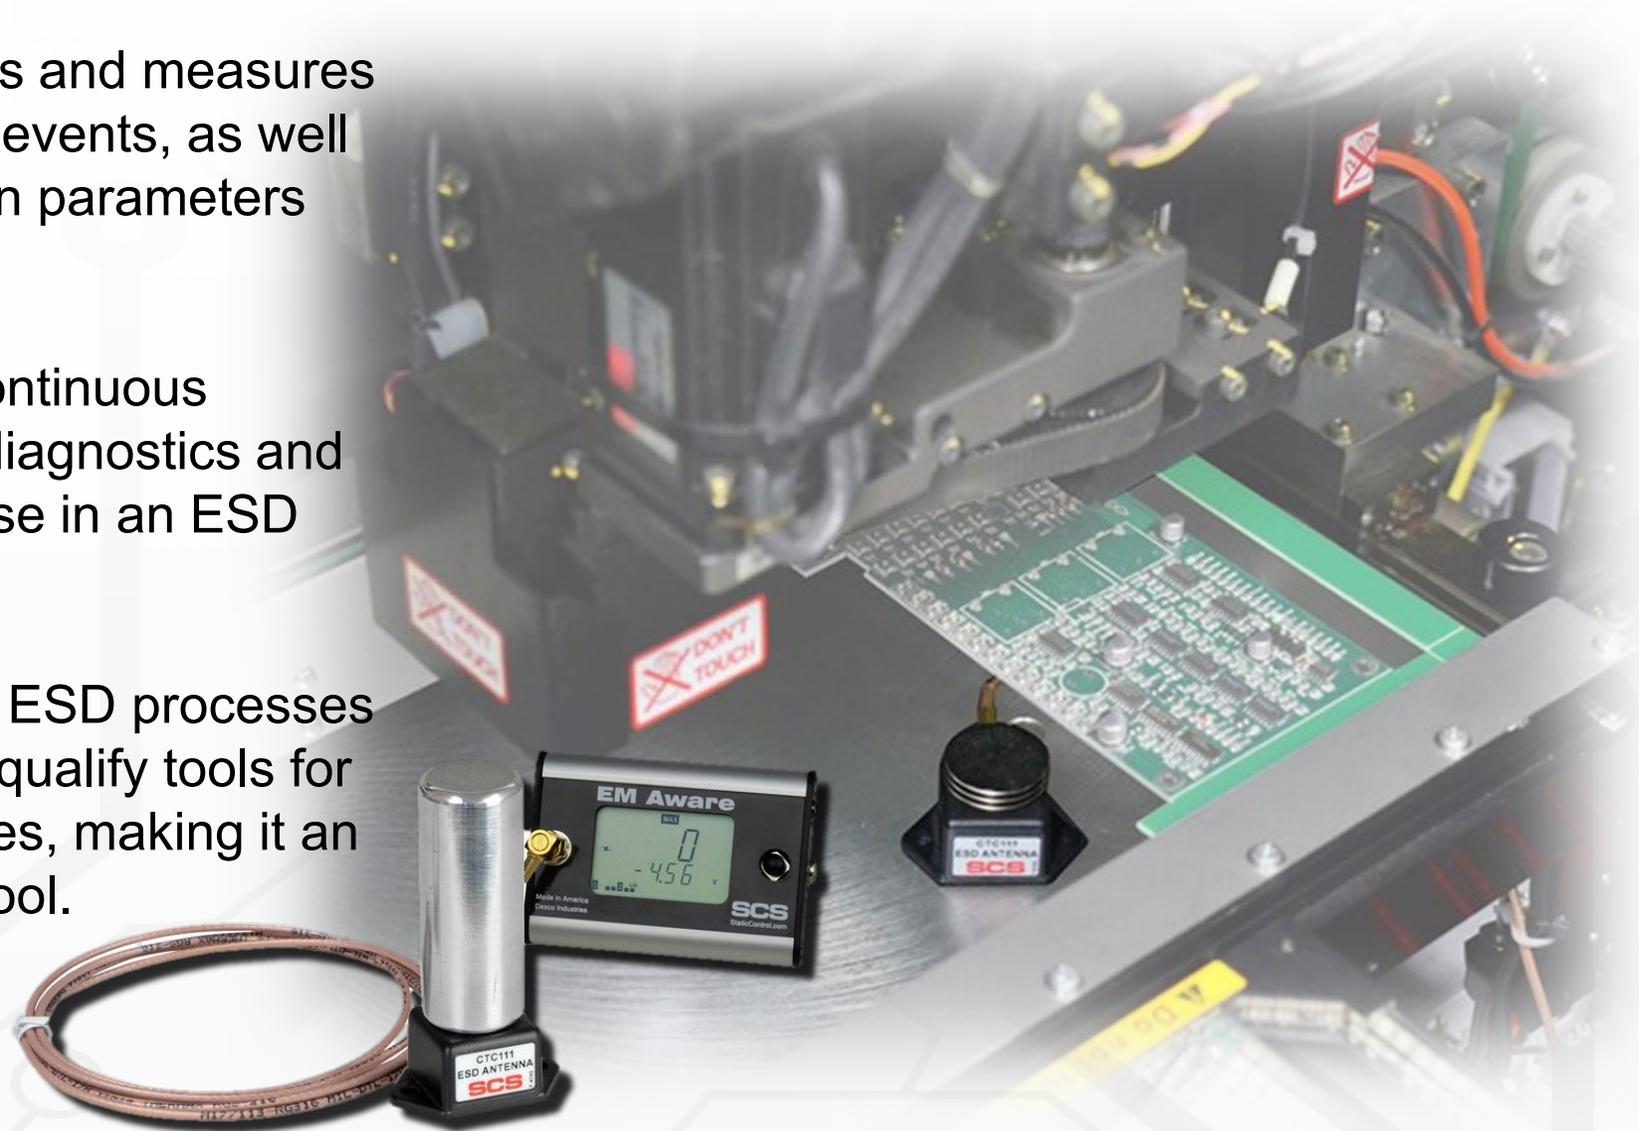

SCS Static Management Program (SMP) continuously monitors your ESD process control system throughout all stages of manufacturing. The SMP Software captures data from SCS workstation, equipment and ESD event continuous monitors and provides a real-time picture of critical manufacturing processes.

Ion Pro

EM AWARE MONITOR

- The EM Aware Monitor detects and measures electrostatic discharge (ESD) events, as well as static voltage and ionization parameters (depending on the model).
- The EM Aware Monitor is a continuous monitor with comprehensive diagnostics and troubleshooting features for use in an ESD environment.
- Provides monitoring of critical ESD processes and is an instrument that can qualify tools for handling ESD-sensitive devices, making it an essential ESD management tool.

WS AWARE MONITOR

- Continuously monitors all grounding parameters in full compliance with ANSI/ESD S20.20 in accordance with ESD TR1.0-01-01, as well as high-frequency noise (EMI) on ground.
- It utilizes dual wrist straps for a continuous resistivity check of human body connection. The monitor uses advanced digital signal processing technology for reliable monitoring with ultra-low control voltage.
- Optional Big Brother remote terminals allow the monitor to alarm when an operator approaches static sensitive components but does not plug in his/her wrist strap properly.
- Continuously monitors the path-to-ground integrity of two operators, two conductive or dissipative worksurfaces, and two metal tools

WS AWARE MONITOR

Body Voltage

- Monitors voltage generated by the operator
- Monitors induced voltage on the operator from powered tools and PCBs

Workstation 1

Operator Body Voltage 1

Body Resistance

- Identifies a non-grounded operator
- Identifies faulty cords
- Monitors for dry skin

Operator Body Resistance 1

EMI Voltage

- Identifies high frequency noise

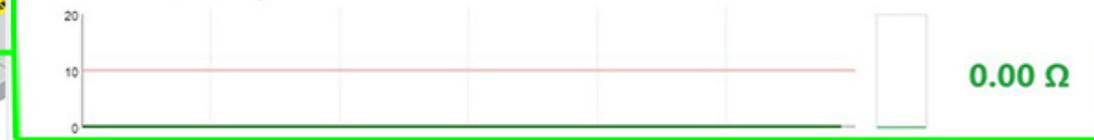

Metal Ground EMI Voltage 1

Metal Ground Impedance

- Identifies impedance to ground
- Ensures monitor grounding
- Identifies faulty ground cords

Metal Ground Impedance 1

Big Brother Sensor

- Identifies operators who have not plugged in

Soft Ground Resistance

- Identifies faulty ground cords
- Identifies non-grounded ESD mats
- Identifies intermittent ground connection

Soft Ground Resistance 1

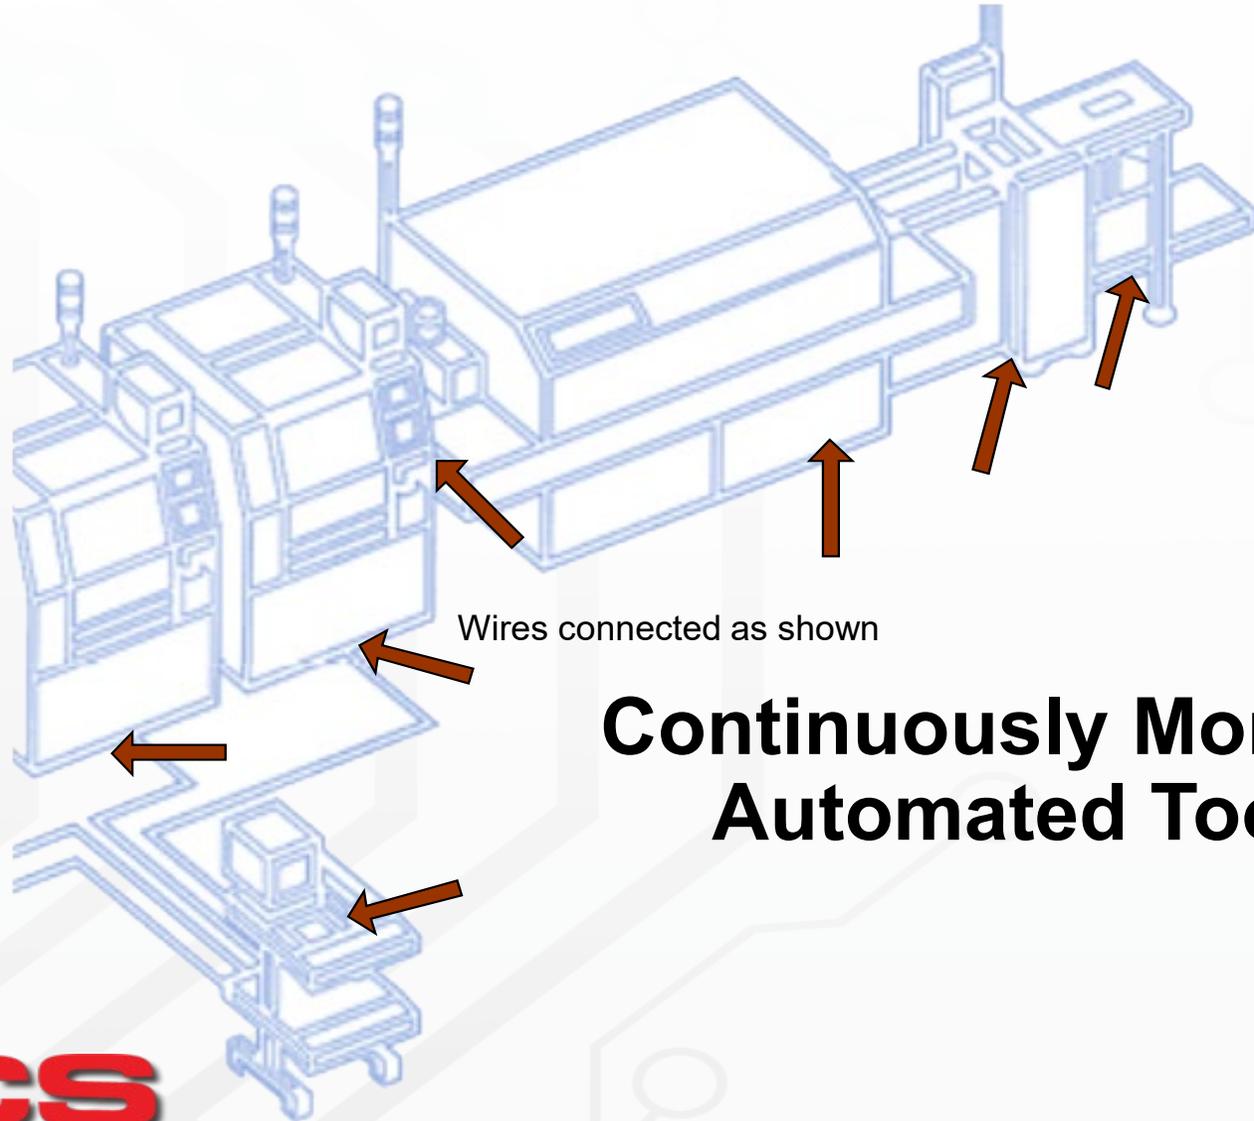

GROUND MASTER MONITOR

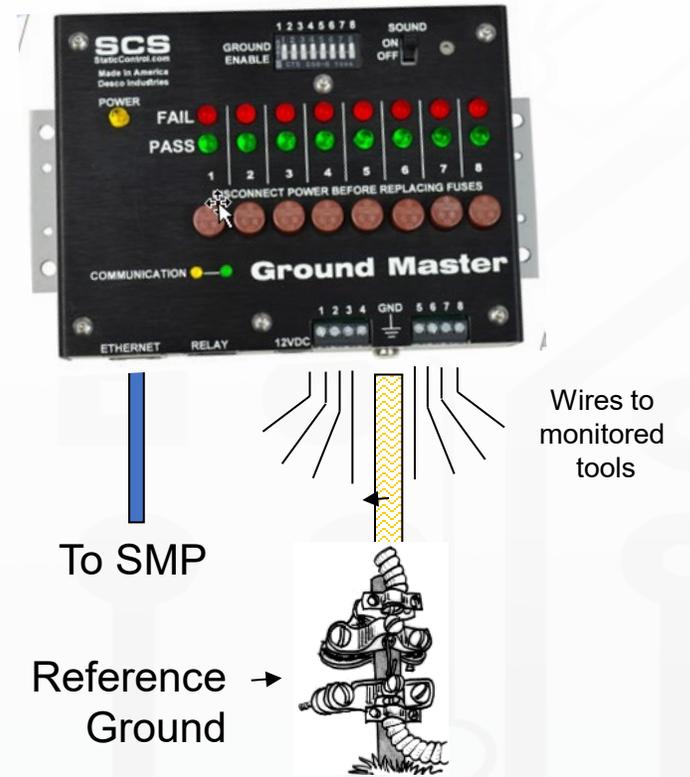

- Ground Master Monitor is designed to provide continuous monitoring of proper ground connections of up to eight tools.
- Ground Master Monitor measures impedance in accordance with ANSI/ESD S20.20
- Ground Master Monitor also monitors EMI Voltage signals on each ground, to assist in diagnostics of equipment lockups and malfunctions.
- Ground Master Monitor provides intelligent information to a facility monitoring system with detailed status on each ground connection.

GROUND MASTER MONITOR

**Continuously Monitors
Automated Tools**

ION PRO™ BENCHTOP IONIZER

- **Steady-state DC Benchtop Ionizer with Ion Gauge™ Technology**
Produces excellent neutralization performance using an ion collecting plate to sample both balance and discharge time.
- **Discharge Time Monitoring**
Alarms if the ionizer requires maintenance due to inefficient neutralization
- **Less than 2 Seconds Discharge Time with ± 3 Volts Balance**
Meets the ANSI/ESD S20.20 required limits for ionization tested per ANSI/ESD STM3.1 and ESD TR53
- **Ethernet Connectivity**
- Provides network communication with Static Management Program (SMP) to collect and report the statuses for balance and discharge time

DIAGNOSTIC KITS

770050

SMP Diagnostic Kit

Kit Includes:

- (1) [770121](#) SMP Software License
- (1) [770044](#) Ground Master Monitor
- (1) [770067](#) WS Aware Monitor
- (3) [770066](#) EM Aware Monitors
- (1) 8-Port Ethernet Switch
- (6) CAT5E Cables

770051

ESD Event Diagnostic Kit

Kit Includes:

- (1) [770121](#) SMP Software License
- (4) [770066](#) EM Aware Monitors
- (1) 5-Port Ethernet Switch

CALIBRATION

Color coded monitor statuses help identify which are within or out of calibration

WHAT IS THE PAYBACK?

Instead of spending money on just prevention, not knowing if products are protected, and unable to determine payback...

- Companies can now determine and measure their ROI
- Savings may be realized from:
 - Higher yields & process efficiencies
 - Elimination of costly inspections
 - Fewer customer complaints
 - Less re-work and lower field returns
 - Budgets driven by performance data
- Leverage SMP to attract and retain customers
 - New source of competitive advantage
 - Tip the scale in project negotiations
